Mr. Schreiber, please compare the following sequences:

- 1) SEQ ID NO:1 against SEQ ID NO:5
- 2) SEQ ID NO:2 against SEQ ID NO:5

*Please save results to diskette.*

Thank you very much.

What is claimed is:

1. An isolated and purified polynucleotide fragment encoding a polypeptide comprising the amino acid sequence of SEQ ID No:1.
2. A hybridization probe comprising the polynucleotide fragment of claim 1.
3. An isolated and purified polynucleotide fragment comprising SEQ ID No:2.
4. An isolated and purified polynucleotide fragment which is completely complementary to the polynucleotide of claim 1.
5. A hybridization probe comprising the polynucleotide fragment of claim 4.
6. An expression vector comprising the polynucleotide of claim 1.
7. A host cell containing the expression vector of claim 6.
8. A method for producing a polypeptide comprising the amino acid sequence of SEQ ID NO:1, the method comprising the steps of:
  - a) culturing the host cell of claim 7 under conditions suitable for the expression of the polypeptide; and
  - b) recovering the polypeptide from the host cell culture.
9. A method for detection of a polynucleotide encoding a polypeptide comprising the amino acid sequence of SEQ ID NO:1 in a biological sample containing nucleic acid material, the method comprising the steps of:
  - a) hybridizing the polynucleotide of claim 4 to the nucleic acid material of the biological sample, thereby forming a hybridization complex; and
  - b) detecting the hybridization complex, wherein the presence of the hybridization complex correlates with the presence of the polynucleotide encoding the polypeptide in the biological sample.
